

When a pet's body processes nitrogenous compounds, one of the by-products is ammonia.

Microban® technology reduces ammonia odor caused by the breakdown of urine by 99%!

Since ammonia would be harmful, the body converts the ammonia to urea which is then expelled.

When the urea is expelled onto the synthetic turf infill, naturally-occurring microbes begin to break it down.

The result of the breakdown is two molecules of ammonia and one molecule of carbon dioxide.

Envirofill® infill is infused with Microban® Antimicrobial Technology to help reduce the creation of ammonia.
